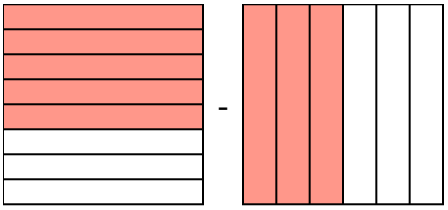
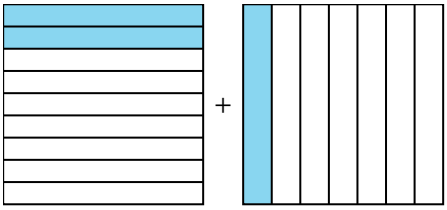
Solve each problem.

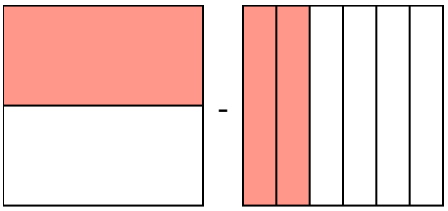
1) $\frac{5}{8} - \frac{3}{6} =$



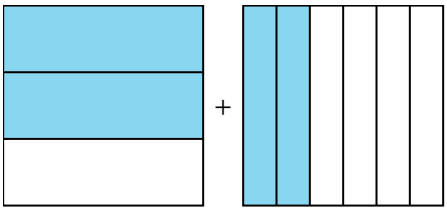
2) $\frac{2}{9} + \frac{1}{7} =$



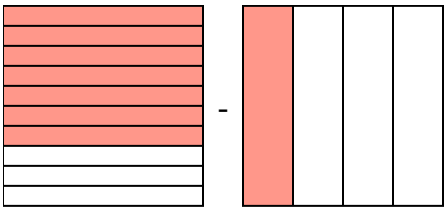
3) $\frac{1}{2} - \frac{2}{6} =$



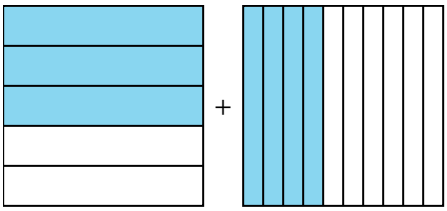
4) $\frac{2}{3} + \frac{2}{6} =$



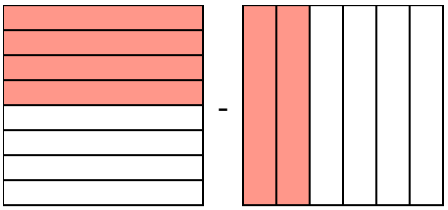
5) $\frac{7}{10} - \frac{1}{4} =$



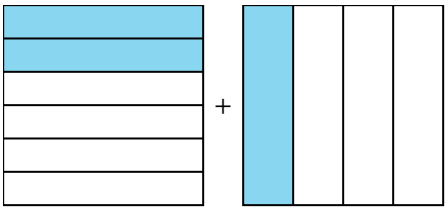
6) $\frac{3}{5} + \frac{4}{10} =$



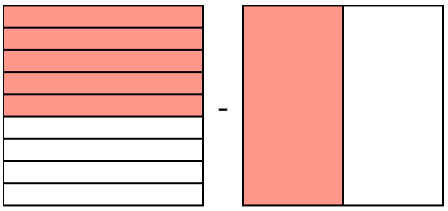
7) $\frac{4}{8} - \frac{2}{6} =$



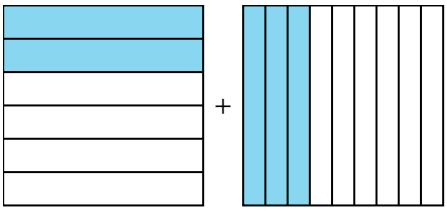
8) $\frac{2}{6} + \frac{1}{4} =$



9) $\frac{5}{9} - \frac{1}{2} =$



10) $\frac{2}{6} + \frac{3}{9} =$



Answers

1. _____
2. _____
3. _____
4. _____
5. _____
6. _____
7. _____
8. _____
9. _____
10. _____

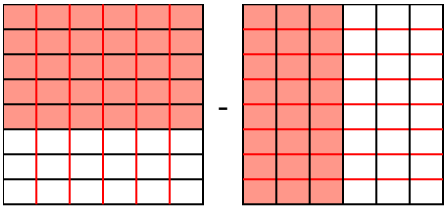
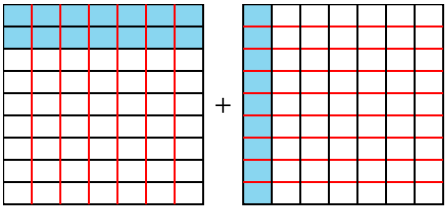
Adding and Subtracting Fractions Visually (Different Denominators) Name: **Answer Key**

Solve each problem.

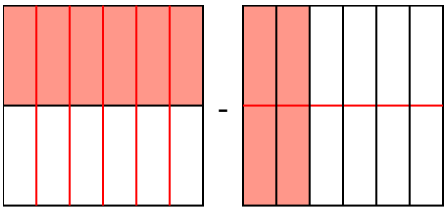
1) $\frac{5}{8} - \frac{3}{6} = \frac{15}{24} - \frac{12}{24} = \frac{3}{24}$



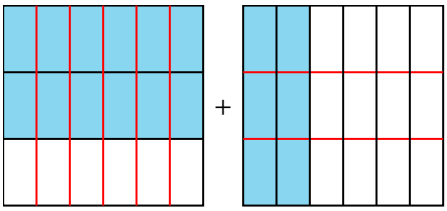
2) $\frac{2}{9} + \frac{1}{7} = \frac{14}{63} + \frac{9}{63} = \frac{23}{63}$



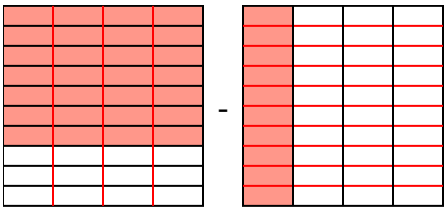
3) $\frac{1}{2} - \frac{2}{6} = \frac{3}{6} - \frac{2}{6} = \frac{1}{6}$



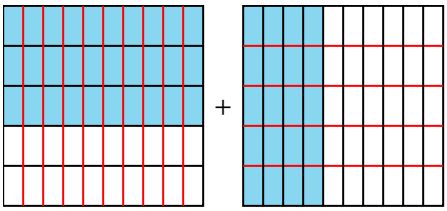
4) $\frac{2}{3} + \frac{2}{6} = \frac{4}{6} + \frac{2}{6} = 1\frac{0}{6}$



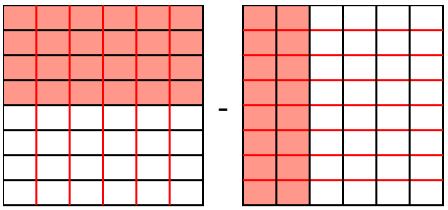
5) $\frac{7}{10} - \frac{1}{4} = \frac{14}{20} - \frac{5}{20} = \frac{9}{20}$



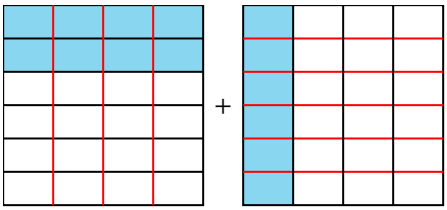
6) $\frac{3}{5} + \frac{4}{10} = \frac{6}{10} + \frac{4}{10} = 1\frac{0}{10}$



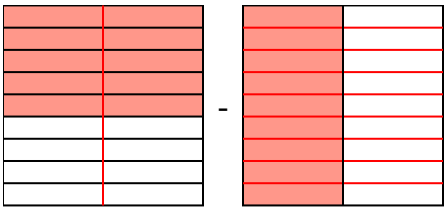
7) $\frac{4}{8} - \frac{2}{6} = \frac{12}{24} - \frac{8}{24} = \frac{4}{24}$



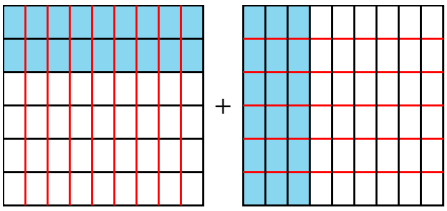
8) $\frac{2}{6} + \frac{1}{4} = \frac{4}{12} + \frac{3}{12} = \frac{7}{12}$



9) $\frac{5}{9} - \frac{1}{2} = \frac{10}{18} - \frac{9}{18} = \frac{1}{18}$



10) $\frac{2}{6} + \frac{3}{9} = \frac{6}{18} + \frac{6}{18} = \frac{12}{18}$



Answers

1. $\frac{3}{24}$
2. $\frac{23}{63}$
3. $\frac{1}{6}$
4. $1\frac{0}{6}$
5. $\frac{9}{20}$
6. $1\frac{0}{10}$
7. $\frac{4}{24}$
8. $\frac{7}{12}$
9. $\frac{1}{18}$
10. $\frac{12}{18}$
