

**Determine which expression is the correct answer.****Answers**

- 1) A house was on sell for \$23,451. If you wanted to offer 6% less than the asking price(p) which expression shows how much you should offer?  
A.  $p - 1.06$                       B.  $p - 0.06$                       C.  $p - 0.06p$                       D.  $p \times 0.06$
- 2) Luke drew a square with each side being exactly 9 centimeters long. If he wanted to make the square 5% larger which expression can he use to find the new sides length?  
A.  $9 \times 1.05$                       B.  $9 + 1.05$                       C.  $9 + 0.05$                       D.  $9 \times 0.05$
- 3) Joe was earning \$10 an hour before his raise. After his 5% raise he was making \$10.5 an hour. Which expression shows how his new hourly rate was calculated?  
A.  $10 \times 0.05$                       B.  $10 + 0.05$                       C.  $10 + 1.05$                       D.  $10 \times 1.05$
- 4) A store raised the price on watermelons 1%. The original price for each was X dollars. Which expression shows the new price of the watermelons?  
A.  $X + 0.01$                       B.  $X + 1.01$                       C.  $X + (0.01 \times X)$                       D.  $X \times 0.01$
- 5) Over the summer gas prices dropped 1%. Which expression shows the new price of a gallon of gas? (the old price is represented by g)  
A.  $g - 0.01$                       B.  $g \times 0.01$                       C.  $g - 0.01g$                       D.  $g - 1.01$
- 6) An icecream bar was 224 calories. If they increased the size of the bar by 8% which expression can be used to find the new calorie count?  
A.  $224 \times 1.08$                       B.  $224 + 0.08$                       C.  $224 \times 0.08$                       D.  $224 + 1.08$
- 7) A mall kiosk needed to buy 23 new cell phone cases at z dollars a piece. Because they were buying so many they got 7% off the price. Which expression shows how much money they saved?  
A.  $23z + 0.07$                       B.  $0.07 \times 23z$                       C.  $23z + 1.07$                       D.  $23z - 0.07$
- 8) Last year the price of a college textbook(b) was \$195. This year the price will be 6% higher. Which expression shows the difference in price from last year to this year?  
A.  $b - 1.06$                       B.  $b \times 0.06$                       C.  $b - 0.06$                       D.  $b - 6$
- 9) This years model of a cell phone is 7 percent heavier than last years. This years model weight is represent by w. Which expression can be used to calculate the weight of last years model?  
A.  $w - 0.07$                       B.  $w - 1.07$                       C.  $w \times 0.07$                       D.  $w \div 1.07$
- 10) The regular price of a computer was 573 dollars, but over the weekend it'll be on sale for for 7 percent off. Which expression shows the difference in price from normal(n) to sale?  
A.  $n - 7$                       B.  $n \times 0.07$                       C.  $n - 0.07$                       D.  $n - 1.07$
