

Solve each problem.

1) $\frac{1}{2} - \frac{2}{5} =$

2) $\frac{4}{5} + \frac{1}{7} =$

3) $\frac{1}{2} - \frac{2}{10} =$

4) $\frac{5}{7} + \frac{5}{10} =$

5) $\frac{5}{6} - \frac{3}{9} =$

6) $\frac{3}{4} + \frac{1}{2} =$

7) $\frac{6}{8} - \frac{2}{4} =$

8) $\frac{5}{9} + \frac{1}{4} =$

9) $\frac{4}{8} - \frac{4}{9} =$

10) $\frac{1}{5} + \frac{1}{6} =$

Answers

1. _____
2. _____
3. _____
4. _____
5. _____
6. _____
7. _____
8. _____
9. _____
10. _____

Solve each problem.

1) $\frac{1}{2} - \frac{2}{5} = \frac{5}{10} - \frac{4}{10} = \frac{1}{10}$

2) $\frac{4}{5} + \frac{1}{7} = \frac{28}{35} + \frac{5}{35} = \frac{33}{35}$

3) $\frac{1}{2} - \frac{2}{10} = \frac{5}{10} - \frac{2}{10} = \frac{3}{10}$

4) $\frac{5}{7} + \frac{5}{10} = \frac{50}{70} + \frac{35}{70} = 1\frac{15}{70}$

5) $\frac{5}{6} - \frac{3}{9} = \frac{15}{18} - \frac{6}{18} = \frac{9}{18}$

6) $\frac{3}{4} + \frac{1}{2} = \frac{3}{4} + \frac{2}{4} = 1\frac{1}{4}$

7) $\frac{6}{8} - \frac{2}{4} = \frac{6}{8} - \frac{4}{8} = \frac{2}{8}$

8) $\frac{5}{9} + \frac{1}{4} = \frac{20}{36} + \frac{9}{36} = \frac{29}{36}$

9) $\frac{4}{8} - \frac{4}{9} = \frac{36}{72} - \frac{32}{72} = \frac{4}{72}$

10) $\frac{1}{5} + \frac{1}{6} = \frac{6}{30} + \frac{5}{30} = \frac{11}{30}$

Answers

1. $\frac{1}{10}$

2. $\frac{33}{35}$

3. $\frac{3}{10}$

4. $1\frac{15}{70}$

5. $\frac{9}{18}$

6. $1\frac{1}{4}$

7. $\frac{2}{8}$

8. $\frac{29}{36}$

9. $\frac{4}{72}$

10. $\frac{11}{30}$
