Solve each problem.

1) The rectangle below has the dimensions 4×9. Create a rectangle with the same area, but a different perimeter.

2) The rectangle below has the dimensions 2×5. Create a rectangle with the same area, but a different perimeter.

3) The rectangle below has the dimensions 2×3. Create a rectangle with the same area, but a different perimeter.

4) The rectangle below has the dimensions 5×6. Create a rectangle with the same area, but a different perimeter.

5) The rectangle below has the dimensions 3×8. Create a rectangle with the same area, but a different perimeter.
1) The rectangle below has the dimensions 4x9. Create a rectangle with the same area, but a different perimeter.

2) The rectangle below has the dimensions 2x5. Create a rectangle with the same area, but a different perimeter.

3) The rectangle below has the dimensions 2x3. Create a rectangle with the same area, but a different perimeter.

4) The rectangle below has the dimensions 5x6. Create a rectangle with the same area, but a different perimeter.

5) The rectangle below has the dimensions 3x8. Create a rectangle with the same area, but a different perimeter.
