

Solve each problem.

- 1) Janet had saved up thirty-five quarters and decided to spend them on sodas. If it costs nine quarters for each soda from a soda machine, how many more quarters would she need to buy the final soda?

- 2) A store owner had nine employees and bought thirty-two uniforms for them. If he wanted to give each employee the same number of uniforms, how many more should he buy so he doesn't have any extra?

- 3) A post office has twenty-eight pieces of junk mail they want to split evenly between eight mail trucks. How many extra pieces of junk mail will they have if they give each truck the same amount?

- 4) Luke had thirty-five pieces of candy. If he wants to split the candy into six bags with the same amount of candy in each bag, how many more pieces would he need to make sure each bag had the same amount?

- 5) It takes seven grams of plastic to make a ruler. If a company had forty-one grams of plastic, how many entire rulers could they make?

- 6) A food company has forty-nine kilograms of food to put into boxes. If each box gets exactly five kilograms, how many boxes will they have?
