Two Step Problems

Name:

Solve each problem.

1) In a video game, each enemy defeated gives you three points. If a level has seven enemies total and you destroy all but four of them, how many points would you earn?

2) A chef needs six potatoes for a meal. He has already cooked three. If each potato takes three minutes to cook, how long will it take him to cook the rest?

3) Each chocolate bar in a box cost $4. If a box had ten bars total and Tiffany sold all but eight bars, how much money would she have made?

4) Roger bought six boxes of chocolate candy and gave three to his little brother. If each box has two pieces inside it, how many pieces did Roger still have?

5) At lunch a waiter had ten customers and three of them didn't leave a tip. If he got $3 each from the ones who did tip, how much money did he earn?

6) Ned invited fourteen friends to a birthday party, but five couldn't come. If he wanted to buy enough cupcakes so each person could have exactly seven, how many should he buy?

7) A magician was selling magic card decks for two dollars each. If he started with twelve decks and by the end of the day he had five left, how much money did he earn?

8) Katie earned six points for each bag of cans she recycled. If she had nine bags, but didn't recycle two of them, how many points would she have earned?

9) A painter needed to paint nine rooms in a building. Each room takes five hours to paint. If he already painted four rooms, how much longer will he take to paint the rest?

10) Rachel baked six brownies, but needed eight total for her party. If she used eight spoonfuls of flour on each one, how much cups of flour does she still need?

1. _____

2. _____

3. _____

4. _____

5. _____

6. _____

7. _____

8. _____

9. _____

10. _____
