Find the equivalent fraction. Write as a mixed number (if possible).

1) \( \frac{1}{8} = \frac{3}{4} \)  
2) \( \frac{4}{6} = \frac{5}{8} \)  
3) \( \frac{1/2}{2/5} = 1 \)  
4) \( \frac{1/5}{1/2} = 1 \)  
5) \( \frac{2/3}{7/9} = 1 \)  
6) \( \frac{4/5}{7/8} = 1 \)  
7) \( \frac{4/8}{2/3} = 1 \)  
8) \( \frac{2/5}{1/9} = 1 \)  
9) \( \frac{6/7}{2/4} = 1 \)  
10) \( \frac{5/9}{2/3} = 1 \)  
11) \( \frac{6/7}{4/8} = 1 \)  
12) \( \frac{2/9}{1/3} = 1 \)  
13) \( \frac{1/4}{3/7} = 1 \)  
14) \( \frac{1/2}{7/9} = 1 \)
Find the equivalent fraction. Write as a mixed number (if possible).

1) \( \frac{1}{8} = \frac{4}{24} \)  
   \( \frac{3}{4} = 1 \)

2) \( \frac{4}{6} = \frac{1 \frac{2}{30}}{1} \)

3) \( \frac{1}{2} = \frac{1 \frac{1}{4}}{1} \)

4) \( \frac{1}{5} = \frac{2}{5} \)

5) \( \frac{2}{3} = \frac{18}{21} \)  
   \( \frac{7}{9} = 1 \)

6) \( \frac{4}{5} = \frac{32}{35} \)  
   \( \frac{7}{8} = 1 \)

7) \( \frac{4}{8} = \frac{12}{16} \)  
   \( \frac{2}{3} = 1 \)

8) \( \frac{2}{5} = \frac{3 \frac{3}{5}}{1} \)  
   \( \frac{1}{9} = 1 \)

9) \( \frac{6}{7} = \frac{1 \frac{10}{14}}{1} \)  
   \( \frac{2}{4} = 1 \)

10) \( \frac{5}{9} = \frac{15}{18} \)  
   \( \frac{2}{3} = 1 \)

11) \( \frac{6}{7} = \frac{1 \frac{20}{28}}{1} \)  
    \( \frac{4}{8} = 1 \)

12) \( \frac{2}{9} = \frac{6}{9} \)  
    \( \frac{1}{3} = 1 \)

13) \( \frac{1}{4} = \frac{7}{12} \)  
    \( \frac{3}{7} = 1 \)

14) \( \frac{1}{2} = \frac{9}{14} \)  
    \( \frac{7}{9} = 1 \)
Find the equivalent fraction. Write as a mixed number (if possible).
