Let's hop into the world of a fascinating creature - the grasshopper! These intriguing insects belong to the group of bugs called Orthoptera, which also includes crickets and katydids. Grasshoppers are known for their long, slender bodies, powerful hind legs for jumping, and two pairs of wings. They can come in many colors, from green and brown to bright yellow or red, which helps them blend into their surroundings.

Speaking of surroundings, grasshoppers are found all around the world except for extreme cold regions like the North and South poles. They make their homes in meadows, fields, and just about

anywhere with lots of plants. Why, you ask? Because these insects are primarily herbivores, munching on a diet of leaves, grasses, and cereal crops. Some larger species might eat smaller insects, but mostly, they're all about the greens.

Now, let's look at the life cycle of these leaf-loving critters. Grasshoppers go through a process called incomplete metamorphosis, which includes three stages: egg, nymph, and adult. After hatching from eggs, the nymphs look like tiny adults but without wings, and they grow bigger by shedding their skin several times. By the time they reach the adult stage, they have full-grown wings and are ready to start the cycle all over again by laying eggs.

Grasshoppers may seem small and harmless, but they actually play a big role in our world. For other animals, they're an important part of the food chain, serving as a meal for birds, reptiles, and other insects. For humans, they can sometimes be pests, damaging crops, but they're also admired for their ability to jump and are even considered symbols of luck in many cultures. With their powerful jumps, interesting life cycle, and important role in the ecosystem, grasshoppers truly are fascinating creatures to learn about.

Grass Hoppers

Solv	ve each problem.		
Use	the article to answer the question.		
1)	How many wings do grasshoppers	nave?	
	A. 3 pairs	B. grasshoppers do not	have wings
	C. 2 pairs	D. 1 pair	
2)	What can grasshoppers be consider	ed in many cultures?	
	A. Symbols of beauty	B. Symbols of strength	
	C. Symbols of luck	D. Symbols of danger	
3)	Where can grasshoppers be found?		
	A. Fields and meadows	B. Mountains and caves	S
	C. Oceans and rivers	D. Deserts and jungles	
4)	Why are grasshoppers admired in s	ome cultures?	
	A. Ability to climb	B. Ability to fly	
	C. Ability to jump	D. Ability to swim	
5)	What is the role of grasshoppers in	the food chain?	
	A. Serve as predators for smaller i	B. Serve as pollinators	for flowers
	C. Serve as a meal for predators	D. Serve as plant fertili	zers
6)	What are grasshoppers primarily kr	own for?	
	A. Climbing	B. Jumping	
	C. Swimming	D. Flying	
7)	What do grasshoppers primarily ear	?	
	A. Leaves and grasses	B. Meat and smaller ins	sects
	C. Nuts and seeds	D. Fish and algae	
8)	What is the process called where g	asshoppers go through different sta	ges of development?
	A. Instant metamorphosis	B. Complete metamorp	hosis
	C. Incomplete metamorphosis	D. Slow metamorphosis	8
9)	What happens to the nymphs as the	y grow bigger?	
	A. They grow larger wings	B. Their color changes	
	C. They shed their skin several tin	D. They form cocoons	
10)	What do grasshopper nymphs look	like?	
	A. Tiny adults with no rear legs	B. Tiny adults without	wings
	C. Caterpillars with only 6 legs	D. Small worms

	Grass Hoppers Name:
<u>13</u> )	"You can find me anywhere around the globe except in the icy regions like the North pole. It's just too cold there!"
14)	"We grasshoppers don't like to jump, we prefer crawling around."
15)	"I'm born with fully grown wings."
16)	"I cannot jump at all."
17)	"As a herbivore, I love eating leaves, grasses, and cereal crops. Yum, yum!"
18)	"We're more than just jumping bugs. We grasshoppers actually play a pretty big role in the food chain."
<b>19</b> )	"You might see us in many colors, it helps me and my friends hide from our predators."
20)	"I prefer to live in the North and South poles."
21)	"I only love to live in areas with extreme cold temperatures."
22)	"I'm considered bad luck in many cultures."
23)	"You'll see me hanging out in meadows and fields a lot. Lots of greenery to munch on!"
24)	"I can be a beneficial insect for crop farmers."
25)	"In many cultures, I am seen as a symbol of good luck. It's pretty cool, right?"
26)	"From a tiny egg, I become a little version of my adult self, then I grow wings and become a full-grown grasshopper."
27)	"Some of my bigger cousins might nibble on smaller insects, but we mostly prefer our veggies."
28)	"I'm a carnivore, I only eat other small insects."
29)	"I'm probably most well known for my powerful hind legs. I use them to jump from blade of grass."
30)	"Birds, reptiles, and other insects might see me as a meal. So I must stay alert."
Dete	ermine if the statement is a fact or opinion based on the information in the article.
31)	The life of a grasshopper includes three stages - the egg, nymph and adult stages.
32)	Grasshoppers' vibrant colors make them the most beautiful insects.
33)	Grasshoppers usually eat leaves, grasses, and cereal crops.
34)	Grasshoppers are more interesting than other insects because they have two pairs of wings.
35)	Grasshoppers can have different colors including green, brown, yellow or red.
36)	It is amazing how grasshoppers can grow bigger by shedding their skin.
37)	A lot of animals like birds, reptiles, and even other insects eat grasshoppers.
38)	You cannot find grasshoppers in extremely cold areas like the North and South poles.
<b>39</b> )	Grasshoppers eating plants is a bit annoying.
<b>40</b> )	Grasshoppers are interesting because they can jump really high.
Dete	ermine if the statement is true or false.
41)	Grasshoppers serve as a meal for birds.

- 42) Grasshoppers are considered symbols of bad luck in many cultures.
- **43**) Grasshopper nymphs do not have wings.

44       Grasshoppers belong to the same group of bugs as bees and butterflies.         45       Grasshoppers grow bigger by shedding their skin.         46       Grasshoppers are primarily carnivores, munching on smaller insects.         47       Grasshoppers are all green in color.         48       Grasshoppers are born with full-grown wings.         49       Grasshoppers damage crops and are considered pests by humans.         50       Grasshoppers damage crops and are considered pests by humans.         50       Grasshoppers aren't nocturnal; they're active during the day. Let's hop into the world of a fascinating creature - the grasshopper! These intriguing insects belong to the group of bugs called Orthoptera, which also includes crickets and katydids. Grasshoppers are known for their long, slender bodies, powerful hind legs for jumping, and two pairs of wings. They can come in many colors, from green and brown to bright yellow or red, which helps them blend into their surroundings.

Speaking of surroundings, grasshoppers are found all around the world except for extreme cold regions like the North and South poles. They make their homes in meadows, fields, and just about

anywhere with lots of plants. Why, you ask? Because these insects are primarily herbivores, munching on a diet of leaves, grasses, and cereal crops. Some larger species might eat smaller insects, but mostly, they're all about the greens.

Now, let's look at the life cycle of these leaf-loving critters. Grasshoppers go through a process called incomplete metamorphosis, which includes three stages: egg, nymph, and adult. After hatching from eggs, the nymphs look like tiny adults but without wings, and they grow bigger by shedding their skin several times. By the time they reach the adult stage, they have full-grown wings and are ready to start the cycle all over again by laying eggs.

Grasshoppers may seem small and harmless, but they actually play a big role in our world. For other animals, they're an important part of the food chain, serving as a meal for birds, reptiles, and other insects. For humans, they can sometimes be pests, damaging crops, but they're also admired for their ability to jump and are even considered symbols of luck in many cultures. With their powerful jumps, interesting life cycle, and important role in the ecosystem, grasshoppers truly are fascinating creatures to learn about.

### Solve each problem.

	the article to answer the question. How many wings do grasshoppers have?		
	<ul><li>A. 3 pairs</li><li>C. 2 pairs</li></ul>		grasshoppers do not have wings 1 pair
2)	What can grasshoppers be considered in man	y cu	ltures?
	A. Symbols of beauty	В.	Symbols of strength
	C. Symbols of luck	D.	Symbols of danger
3)	Where can grasshoppers be found?		
	A. Fields and meadows	B.	Mountains and caves
	C. Oceans and rivers	D.	Deserts and jungles
4)	Why are grasshoppers admired in some culture	res?	
	A. Ability to climb		Ability to fly
	C. Ability to jump	D.	Ability to swim
5)	What is the role of grasshoppers in the food c	hair	1?
-)	A. Serve as predators for smaller insects		Serve as pollinators for flowers
	C. Serve as a meal for predators	D.	Serve as plant fertilizers
6)	What are grasshoppers primarily known for?		
0)	A. Climbing	B.	Jumping
	C. Swimming	D.	Flying
7)	What do grasshoppers primarily eat?		
- )	A. Leaves and grasses	B.	Meat and smaller insects
	C. Nuts and seeds	D.	Fish and algae
8)	What is the process called where grasshopper	s go	through different stages of development?
	A. Instant metamorphosis		Complete metamorphosis
	C. Incomplete metamorphosis	D.	Slow metamorphosis
9)	What happens to the nymphs as they grow bi	ggei	?
,	A. They grow larger wings		Their color changes
	C. They shed their skin several times	D.	They form cocoons
10)	What do grasshopper nymphs look like?		
,	A. Tiny adults with no rear legs	B.	Tiny adults without wings
	C. Caterpillars with only 6 legs	D.	Small worms
