Imagine a bird with a bright red belly, hopping around your backyard. That's probably a robin! These lovely birds are known for their orange-red chests and dark grey-brown upperparts. They have sharp, pointed beaks and are about the size of a clenched fist. Their eyes are like small, dark beads that are always watching and observing.

After meeting them, you might wonder, where do these beautiful creatures live? Robins are found all over North America, and they prefer to stay in areas with trees and shrubs. They build their nests in the forks of trees, using grass and mud, and usually lay 3 to 5 eggs at a time. After about two weeks, baby robins are ready to leave the nest and start their own adventures.

Speaking of adventures, what do you think robins munch on

during their busy day? They love to eat insects, earthworms, berries, and fruits. They are one of the first birds to start hunting for food in the morning, often before the sun even rises! This early bird behavior is why we have the saying 'The early bird gets the worm'.

Robins not only have a unique lifestyle but also share a special bond with us, humans. Many people enjoy watching and listening to robins, as they have a beautiful song and are very active during the day. They also help us by eating insects and worms that can be harmful to our gardens. So, the next time you see a robin, remember these fantastic facts about their life and how they brighten our days with their presence.

Robin Bird

# Determine if the statements is something the animal would say (W) or it it is not something the animal would say (N).

	Dohin Dird	Nama	Answer	Kov					
11)	"I can be found all over deserts."	Name:	Answei	Ксу					
12)									
13)									
14)	"My chest is blue."								
15)	"I hate eating insects and earthworms."								
16)	"I lay only one egg at a time."								
17)									
<b>18</b> )	"I eat harmful insects in your garden, pretty helpful, huh?"								
<b>19</b> )	"I usually build my nests in the forks of trees."								
20)	) "I am not active during the day."								
21)	) "I build my nests on the ground."								
22)	"I start my day late in the morning."								
23)	"Every nest of mine is skillfully built using grass and mud."								
24)									
25)									
26)	) "I am one of the first birds to start hunting for food in the morning, before the sun even rises!"								
27)	"Insects, earthworms, berries, and fruits are my favorite foods to munch on d day."	luring the							
28)	"I don't like eating fruits and berries."								
29)	"I have a bright red belly that separates me from most of the other birds."								
30)	"I usually have 3 to 5 of my little ones who are pretty cute, if I might say so	myself."							
Dete	ermine if the statement is a fact or opinion based on the information in th	e article.							
31)	Robins are early risers and start hunting for their food often before sunrise.								
32)	Robins are admired for their red belly, which is the prettiest compared to oth	er birds.							
33)	Baby robins generally leave the nest after about two weeks.								
34)	Robins' sharp, pointed beaks look the best compared to other birds.								
35)	) Robins construct their nests using grass and mud.								
36)	Seeing robins hop around in the backyard makes a day better.								
37)	The phrase "The early bird gets the worm" is linked to the behavior of robins	5.							
38)	A typical nest of robins contains 3 to 5 eggs.								
39)	Robins make the most interesting nests using grass and mud.								

**40**) The song of a robin is the sweetest among all birds.

## Determine if the statement is true or false.

- 41) Robins diet consists of insects and fruits.
- **42**) Robins often lay 15 eggs at a time.

	Robin Bird	Name:	Answer Key					
<b>43</b> )	Robins are about the size of a clenched fist.							
<b>44</b> )	Robins are usually found all across Europe.							
45)	Robins usually lay 3 to 5 eggs at a time.							
<b>46</b> )	Baby robins leave the nest after 6 months.							
47)	Robins build their nests on the ground.							
<b>48</b> )	Robins usually start searching for food in the late afternoon.							
<b>49</b> )	Robins are one of the first birds to look for food in the morning.							
<b>50</b> )	Robins have small, sharp, pointed beaks.							
	Determine if the sentence is a declarative(d), exclamatory(e), interrogative(i) or imperative(m).							
51)	Robins migrate to warmer places in the winter.							
52)	Robin birds lay blue eggs, how incredible is that!							
53)	Robins have an amazing ability to find worms by listening and cocking their head to one side!							
54)	Robins can live for up to 14 years, that's a long time for a bird!							
55)	Robins have an average wingspan of 12-16 inches, that's impressive!							
56)	Robins build nests out of sticks.							
57)	How many eggs does a robin bird typically lay?							
<b>58</b> )	Did you know that robins can have three broods in one year!							
<b>59</b> )	Robins are found in North America.							
<b>60</b> )	What kind of food do robin birds eat?							
61)	Robins have been known to nest in some strange places, like car wheels or co it's amazing!	oat pocket	S,					
62)	What is the color of a robin bird's chest?							
63)	The sight of a robin is considered to be a sign of spring, how beautiful!							

- **64)** Robins usually build their nests in the crooks of trees using grass and mud, talk about crafty birds!
- 65) Robin birds are actually a variety of thrush, what a stunning revelation!
- 66) The dizzying capacity of robins to migrate long distances is astonishing!
