1)

Figure 1 shows the construction of the number 64 through a series of steps. The top row contains the numbers 1, 1, 7, and 4. Below these, a series of operations are shown: a minus sign followed by a downward arrow, then a horizontal line, then another minus sign followed by a downward arrow, then another horizontal line, then a third minus sign followed by a downward arrow, and finally a fourth horizontal line. The final result, 64, is shown to the left of the first horizontal line.

2)

The diagram illustrates the subtraction of 63 from 260 using a base ten blocks chart. The chart has four columns representing hundreds, tens, and ones. The process shows borrowing from the hundreds column to the tens column, and then from the tens column to the ones column, resulting in 197.

	Hundreds	Tens	Ones
Initial	2	6	0
Step 1: Borrow from hundreds to tens	1	16	0
Step 2: Borrow from tens to ones	1	15	10
Final Result	1	9	7

The diagram illustrates the subtraction of 628 from 1800 using a place value chart. The chart has four columns: thousands, hundreds, tens, and ones. The process is shown in three steps:

- Step 1:** The initial numbers are 1800 and 628. The thousands column has 18, the hundreds column has 0, the tens column has 0, and the ones column has 0. The subtraction 1800 - 628 is shown.
- Step 2:** A borrow is taken from the thousands column (18 becomes 17) and added to the hundreds column (0 becomes 10). The subtraction is now 1700 - 628.
- Step 3:** A borrow is taken from the hundreds column (17 becomes 16) and added to the tens column (0 becomes 10). The subtraction is now 1600 - 628.
- Step 4:** A borrow is taken from the tens column (16 becomes 15) and added to the ones column (0 becomes 10). The subtraction is now 1500 - 628.
- Final Result:** The final result is 1172.
