

**Solve each problem.****Answers**

- 1) A sub shop sold sandwiches that were one-fifth of a foot long. If you were to cut the sandwich into 5 equal pieces, what fraction of a foot would each piece be?
- 2) A container of 3 metal beams weighed one-half of a ton. If every beam weighed the same amount, how heavy was each?
- 3) Bianca had picked 9 bags of oranges. How many glasses of orange juice could she make if each glass took one-sixth of a bag?
- 4) A pizzeria had 9 cans of tomato sauce. How many pizzas could they make with the cans if each pizza took one-quarter of a can?
- 5) A toy plush weighed one-sixth of a pound. A flimsy box can hold 2 pounds. How many toy plushes could the box hold?
- 6) Olivia wanted her box of candy to last 9 days. If the box weighs one-seventh of pound, how much should she eat each day?
- 7) At a restaurant 6 people were at a table when the waiter brought out one-sixth of a bowl of cheese dip. If they split the bowl evenly, how much would each person get?
- 8) Cody used one-half of a cup of sugar to make a pitcher of lemonade. If he were to pour the lemonade into 6 smaller glasses how much sugar would be in each glass?
- 9) A bag of walnuts was 6 pounds. How many one-seventh of a pound servings are there in a bag?
- 10) A chef had 8 potatoes. How many bowls of mashed potatoes could he make if each bowl used one-third of a potato?
- 11) A group of 3 friends bought a one-ninth of a pound of bubblegum. If they split it equally, how much would each friend get?
- 12) A farmer was dividing up his one-third of an acre of land between his 9 children. Since each child got the same amount of land, what fraction of the acre did each get?
- 13) A glass of water was one-quarter of a liter. How many glasses would it take to fill up a 5 liter jug?

1. _____
2. _____
3. _____
4. _____
5. _____
6. _____
7. _____
8. _____
9. _____
10. _____
11. _____
12. _____
13. _____
