## Solve each problem.

Answers
Ex) Every quarter is 5 nickels. This can be expressed using the equation $\mathrm{y} \times 5=\mathrm{Z}$, where y is equal to the number of quarters and Z is equal to the total number of nickels. Using this equation find the total nickels in 3 quarters.

1) Every meter is 100 centimeters. This can be expressed using the equation $y \times 100=Z$, where y is equal to the number of meters and Z is equal to the total number of centimeters. Using this equation find the total centimeters in 10 meters.
2) Every liter is 1,000 milliliters. This can be expressed using the equation $\mathrm{y} \times 1,000=\mathrm{Z}$, where y is equal to the number of liters and Z is equal to the total number of milliliters. Using this equation find the total milliliters in 4 liters.
3) For each kilogram there are 1,000 grams. This can be expressed using the equation $\mathrm{y} \times$ $1,000=\mathrm{Z}$, where y is equal to the number of kilogram and Z is equal to the total number of grams. Using this equation find the total grams in 7 kilograms.
4) Every dollar is 10 dimes. This can be expressed using the equation $\mathrm{y} \times 10=\mathrm{Z}$, where y is equal to the number of dollars and Z is equal to the total number of dimes. Using this equation find the total dimes in 7 dollars.
5) Every pint is 2 cups. This can be expressed using the equation $y \times 2=Z$, where $y$ is equal to the number of pints and Z is equal to the total number of cups. Using this equation find the total cups in 4 pints.
6) Every dollar is 100 pennies. This can be expressed using the equation $y \times 100=Z$, where y is equal to the number of dollars and Z is equal to the total number of pennies. Using this equation find the total pennies in 9 dollars.
7) For each pound there are 16 ounces. This can be expressed using the equation $y \times 16=Z$, where y is equal to the number of pounds and Z is equal to the total number of ounces. Using this equation find the total ounces in 10 pounds.
8) Every gallon is 4 quarts. This can be expressed using the equation $y \times 4=Z$, where $y$ is equal to the number of gallons and Z is equal to the total number of quarts. Using this equation find the total quarts in 8 gallons.
9) Every cup is 8 ounces. This can be expressed using the equation $\mathrm{y} \times 8=\mathrm{Z}$, where y is equal to the number of cups and Z is equal to the total number of ounces. Using this equation find the total ounces in 9 cups.
10) Every quart is 2 pints. This can be expressed using the equation $y \times 2=Z$, where $y$ is equal to the number of quarts and Z is equal to the total number of pints. Using this equation find the total pints in 4 quarts.
11) Every quarter is 25 pennies. This can be expressed using the equation $y \times 25=Z$, where $y$ is equal to the number of quarters and Z is equal to the total number of pennies. Using this equation find the total pennies in 9 quarters.
12) Every yard is 3 feet. This can be expressed using the equation $y \times 3=Z$, where $y$ is equal to the number of yards and Z is equal to the total number of feet. Using this equation find the total feet in 2 yards.

Ex. $\quad 15$
1.
2.
3.
4.
5.
6.
7.
8.
9.
10. $\qquad$
11. $\qquad$
12. $\qquad$
